Suprotect Series

Suprotect decking is a new generation of wood plastic composite with high-tech co-extrusion technology. Different from traditional WPC , co-extrusion technology is a process in which a protective layer of polymer and an inner WPC layer are co-extruded at the same time with high temperature. We also call it co-extrusion or capped decking.

The inner layer is made of high-density recycled plastic and wood fiber. The patented polymer plastic is used in the outer coating to enhance the resistance. Plus 3D wood grain and professional color matching, both of the quality and appearance are better than the composite decking.

Advantage

High-tech plastic for outer layer 360 degree protection

3D and natural wood texture

Excellent UV resistance

Better anti-scratch and wearing resistance

Stain-proofing and fast cleaning

Slip resistance

100% Eco & recyclable material

Surface Treatments

Front:3D Wood Grain

Back:Brush

Fire Resistance Decking

In order to meet the market demand, we have developed Suprotect Fire Resistant Decking.

It is new for the whole WPC market. It is not simply about adding additives, we must make sure basic performances are not affected at the same time. In 2016 we made a significant breakthrough on the research. After testing, our new fire-resistant products can pass the **ASTM E84 level A** and the **EN13501 Bf1-s1** fire resistance. (The test report is on the Page 6)

Fire Resistance Test

3D Embossing Decking

New Production Technique

Compared to the traditional WPC products,3D embossing product will have a more natural visual appearance and more realistic wood grain texture. 3D embossing decking doesn't need the extra treatment,it can finish the embossing during the extrusion.

Long-termed Durability

The 3D embossing wood grain is much deeper than normal embossing and it can keep long-lasting texture against abrasion during the applications

Back

Excellent structure:
By using Aluminum as the frame, it does not rust, and has good durability and structural strength. We choose black color for the aluminum frame, which is better hiding.

Elegant Design:
600*600mm module, this design is more suitable for the quick installation of small gardens or small projects, and it looks elegant.

Good flexibility:
It can be equipped with the pedestal for installation. It has good flexibility for the ground that needs to be raised.

Composite Decking Series

Composite decking is a new flooring material, a combination of wood fiber, HDPE and different additives. It can not only give the feeling and appearance of wood, but also can solve many problems of wood, like rotting, mildew, cracking, etc. With rapid development of WPC industry, WPC decking has gradually taken the place of wood flooring, and become the mainstream of outdoor decking.

Composite Decking

Advantage

100% recyclable and eco-friendly, saving forest

Water resistance and mildew proofing

Excellent UV resistance

Formaldehyde emission: E0(the highest standard)

Weather resistant from -30°C to 70°C

Termite resistance

DIY and easy installation

No paint or glue needed

Decking Installation Guide

Installation Material

WPC decking panel

Installation Fittings

Clip

Screws

Side clip

Patented Clip - Easy installation and more stable decking system

Installation Steps

1. Install aluminium joist system

Model	Span A(mm)	Span B(mm)
SB03	350	700
ML02	400	
OR02	450	

①Refer to the spacing table to lay two layers of joist.
* Fix the upper joists to the lower ones by using screws.

2.①Fix the side clips onto the joists first.
②Push the deck board tight to the side clips. Suggested length for actual application is not longer than 2.75 meters per piece.

3.①Put the special clip with a side hole into the middle of the decking side groove.
②Make sure the toothed side into the decking groove
③Screw through the side hole and fix the clip to decking board.

4. ①Put the normal clips for the rest. Make sure the toothed side to the groove.
②Slide another board to the clips to the right position.
③Fix the decking through the top holes of the clips.

5.①Repeat the steps above for the decking installation.
②Make sure the gap between cross sections of decking boards no less than 3mm.
③Make sure 10mm gaps to the walls for the expansion or contract.

6.①Predrill a hole like the pic shown below and then screw the decking board to the joist.
②Fix the fascias. Job finished.

Base Adjustable Pedestal System

Our Base Adjustable Pedestal System is an innovative design, mainly used to solve the problems of installing decking on uneven ground, and raising the whole decking system. It's widely used in swimming pools, gardens, rooftop, etc.

MexyBase system has been receiving constant praise since its launch in 2016.

Advantage:

- Hiding the water tube, gauge, cable, etc.
- Meeting the demand of load bearing.
- Raising for water draining to protect decking.
- DIY assemble
- Various adjustable heights
- Fast installation to save time and labor
- Free maintenance
- Patented design

Easy Installation
Smart Design

Adjustable Pedestal

DIY Aluminum Joist System

1. Adjust the the height of the pedestal for actual application, then place them at site according to the reasonable span.

2. Snap the aluminum joists into the pedestal tabs. This smart design can save a lot of time without using screws to lock the joist tight.

3. Insert the joist connector into the two ends of joists. Slide the joist through the gap to the right position. Rotate 90 degree to build the frame structure tight.

4. The last step is to fix the deck boards onto the joists frame structure according to the installation guide. Because of no screws application and the rotation method to build the frame, less labor cost and time is required by using our design.

The Enhanced Aluminum Joist System

- Stable double structure prevents it from changing and moving.
- The aluminum structure is fixed by screws.
- Antioxidant , no rusty or corrosive.

Choosing Our Fences for
your garden must be the unique one among all your neighborhoods

FENCES

With aluminum frame and WPC boards, MecoFence design is coming with patent, which has superior application performance and attractive wood appearance.

Product Features

Durable for Outdoor Application-Stable and anti-UV in any temperatures.

Easy Installation-Just few screws for the fence installation. The smart design makes the fence DIY become possible.

Eco-friendly - MecoFence is made of recyclable materials. It doesn't contain harmful elements or heavy metals.

Confident Warranty- MecoFence offers 10 years warranty

Patented Designs - Unique fencing system and pass wind resistance test.

Eco-wood Ceiling

Eco-wood ceiling series serves as a perfect substitution of real wood ceiling and aluminium ceiling. The simple installation, good thermal insulation and fire resistance make it outstanding among other traditional ceilings. Nowadays, MexyTech eco ceiling series becomes more and more popular in the world because of its excellent features.
